

Open letter to medical professionals and the AMA: Start the conversation

Whereas, within the last 20 years there has been an alarming increase in serious illnesses in the US, along with a marked decrease in life expectancy ([Bezruchka, 2012](#)); and

Whereas, the onset of serious illness is appearing in increasingly younger populations: neurological disease ([Pritchard et al., 2013](#)); obesity, asthma, behavior & learning problems and chronic disease in children and young adults ([Van Cleave et al., 2010](#)); type II diabetes in youth ([Rosenbloom et al., 1999](#)); and

Whereas, the rate of chronic disease in the entire US population has been dramatically increasing with an estimated 25% of the US population suffering from multiple chronic diseases ([Autoimmunity Research Foundation, 2012](#)); and

Whereas, during this same time period, there has been an exponential increase in the adoption of Genetically Modified Food (GMO) crops with associated applications of glyphosate to food crops ([Benbrook, 2012](#)); and

Whereas, over 90% of corn, soy, sugar beets and canola are GMO, modified to withstand direct application of herbicides; and

Whereas, it has become routine for pre-harvest ripening to spray grain, legumes and sugar cane with glyphosate; and

Whereas, Glyphosate and its degradation product, aminomethylphosphonic acid (AMPA) have been detected in **air** ([Majewski et al., 2014](#), [Chang et al., 2011](#)), **rain** ([Scribner et al., 2007](#); [Majewski, 2014](#)), **groundwater** ([Scribner, 2007](#)), **surface water** ([Chang, 2011](#); [Scribner, 2007](#); [Coupe et al., 2012](#)), **soil** ([Scribner, 2007](#)) and **sea water** ([Mercurio et al., 2014](#)), showing that glyphosate and AMPA **persist in the soil and water** and the amounts detected are increasing over time with increasing agricultural use; and

Whereas, glyphosate & AMPA residues are high in our **food** (residues as high as 15 parts per million have been detected in GM soybeans with no residues detected in organic or conventionally grown soy [Bohn et al., 2014](#)); and

Whereas, glyphosate bioaccumulates in organs and tissue ([Kruger et al., 2014](#)); and

Whereas, the biological pathways between glyphosate and chronic disease have been outlined ([Samsel & Seneff, 2013a](#)); and

Whereas, time trends of the rise in chronic diseases along with the rise of glyphosate use and the adoption of GM crops show very high correlations with very strong statistical significance ([Swanson, 2013](#)); and

Whereas, glyphosate has been shown to be toxic to the liver and kidneys ([Cattani et al., 2014](#); [Jayasumana et al., 2014](#); [Lushchak et al., 2009](#); [El-Shenawy, 2009](#); [de Liz Oliveira Cavalli et al., 2013](#); [Séralini et al., 2011](#)); and

Whereas, glyphosate is a patented chelating agent (U.S. patent number [3160632 A](#)) causing

mineral deficiencies; and

Whereas, glyphosate is a patented anti-microbial & biocide (U.S. patent number [20040077608 A1](#) & U.S. patent number 7771736 B2) that preferentially kills beneficial bacteria in our intestines leading to nutrient deficiency, chronic intestinal diseases, inflammation, and autoimmune diseases ([Samsel & Seneff, 2013b](#); [Kruger, 2013](#); [Shehata et al., 2012](#); [Carman et al., 2013](#)); and

Whereas, it is illegal to administer a drug (antibiotic and biocide) in our food without a medical license to do so; and

Whereas, glyphosate leads to teratogenicity and reproductive toxicity in vertebrates ([Antoniou et al., 2012](#)); and

Whereas, glyphosate is an endocrine disruptor ([Gasnier et al., 2009](#); [Paganelli et al., 2010](#); [Antoniou et al., 2012](#); [Thongprakaisang et al., 2013](#)); and

Whereas, there are no “safe” levels of endocrine disruptors ([Vandenberg et al., 2012](#); [Bergman et al., 2013](#)); and

Whereas, imbalances and malfunctions of the endocrine system can lead to diabetes, hypertension, obesity, kidney disease, cancers of the breast, prostate, liver, brain, thyroid, non-Hodgkin's lymphoma ([Marc et al., 2004](#); [Thongprakaisang et al., 2013](#)), osteoporosis, Cushing's syndrome, hypo- and hyperthyroidism, infertility, birth defects, erectile dysfunction, ([Soto & Sonnenschein, 2010](#)), sexual development problems and neurological disorders such as: learning disabilities, attention deficit disorder ([de Cock et al., 2012](#)), autism ([Schulkin, 2007](#)), dementia ([Ghosh, 2010](#)), Alzheimer's ([Merlo et al., 2010](#)), Parkinson's and schizophrenia ([MacSweeney et al., 1978](#)); and

Whereas, endocrine disruptors are especially damaging to organisms undergoing hormonal changes: fetuses, babies, children, adolescents and the elderly ([Bergman et al., 2013](#));

Whereas, the use of glyphosate as an herbicide for numerous decades in the USA and now as a component compound in GMO foods has adversely impacted its human exposure factor to implode within the standard of medical surveillance and care; and

Whereas, a chronically ill patient suffering from long-term, systemic poisoning will not respond to traditional treatment; and

Whereas, most medical personnel are trained only in acute poisoning and not in systemic poisoning; and

Whereas, you have sworn an oath “to apply, for the benefit of the sick, all measures which are required,” and to “prevent disease whenever I can, for prevention is preferable to cure”; and

Whereas, the liability will be on the professional who did not recognize glyphosate poisoning in his/her patients;

We, the undersigned, implore you to take the following actions:

Order toxicology tests for your chronically ill patients, in particular screening for glyphosate and its degradation product AMPA.

Educate yourselves on how to deal with systemic poisoning and detoxification.

Open the conversation with your patients, family and colleagues.

Establish a procedure for surveillance and tracking.

The medical surveillance programs for any hazardous material, such as glyphosate, are designed to systematically collect and analyze health information on exposed individuals to toxic substances. The components involved in a comprehensive medical surveillance program and how these components interrelate should include the following:

1. Biological Monitoring;
2. Protocols for testing and treating;
3. Determination of health hazards, exposures, and job-related risks;
4. Tracking systems;
5. Specific history of what the patient was exposed to or doing prior to their symptoms;
6. Exposure Monitoring System for environment, food, humans and domestic/food animals.

The biological monitoring component for glyphosate and its degradation and metabolic metabolites is a key component which is designed to anticipate disease by sampling and analyzing solid tissues, secretions or excretions. The end results of this monitoring are used to take both preventive and ongoing action for individuals exposed to environmental, workplace and food exposures.

Due to its interference with detoxifying enzymes in the liver, glyphosate enhances toxicity of other chemical exposures. Once a human exposure standard is supported that establishes a baseline of zero tolerance, one will have to address the effect of setting general examination requirements for the chemical glyphosate as well as the requirements for all other chemical exposures.

The proposed generic requirements would have a broader scope and may consist of the following:

1. Require initial exposure monitoring for individuals.
2. Specify the frequency of follow-up monitoring and increase the frequency, dependent upon the determination of systemic toxicological symptoms.
3. Implement specific air sampling techniques in terms of personal and/or environmental monitoring.
4. Develop procedures for individuals' observance of ambient sampling.
5. Require medical surveillance for all individuals pre and post exposure to one half the exposure limits (to be established as a true "zero" level).
6. Assess pre- and post environmental health and toxicology of route of exposure and its origins for glyphosate.

7. Establish a standard of result of the medical exam and tests conducted, as well as any conditions that require follow-up.
8. Adopt biologic exposure indices for glyphosate, its metabolites and degradation.

Update 6/20/2014: One week total: 35 medical professionals, 17 scientists and 103 concerned citizens. An e-mail account was set up to collect signatures and was instantly hacked. Signatures sent in the first 24 hours were lost.

An additional 417 signatures were collected via online petition (appended).

This letter is available [here](#) for download. Print and take to your physician. Collection of signatures is ongoing. You may sign [here](#). Original letter published at the [Seattle Examiner](#).

Signed,

Medical Professionals

Medical Professionals and the AMA

We, the undersigned, implore our Medical Professionals to take the following actions BASED ON THE DATA in our [Open Letter to Medical Professionals and the AMA](#) :

*Order toxicology tests for your patients and chronically ill patients, in particular screening for glyphosate and its degradation product AMPA.

*Educate yourselves on how to deal with systemic poisoning and detoxification.

*Open the conversation with your patients, family and colleagues.

*Establish a procedure for surveillance and tracking.

READ ON - The Open Letter says it all! [Open Letter to Medical Professionals and the AMA](#)

27.	Diane Lalomia	Somewhere, MI	Doctor's need to have ALL the information of exposure to chemicals that the patients has experienced to develop the proper protocol for treatment. Glyphosate is in our food and the impacts on our health need to be measure quantitatively and documented. Health professionals need to LOOK at what is going on in our food system and it's correlation to the declining health of patients.
28.	Brandie Harrop	sherwood park, Canada	I we start testing people it will give us the data we need to link glyphosate to the rise in chronic illnesses plaguing our society
29.	Debbie Dekker	calgary, Canada	Our Medical Professionals should be testing for things like Glyphosate as a preventive measure to other diseases.....get on board doctors..
30.	AnneMarie Call	San Jose, CA	
31.	Aaron hoeker	Scottville, MI

278.	Robert Hampton	Saint-Ignace de Stanbridge, Canada	Look, I've been a sufferer of some of the chronic conditions that have been laid out in the letter and document. To have so much simply due to bad genes seems suspicious and I would tend to think there is more at play. With all the toxicity being spewed into the world, with the lack of proper legislation and the infinite greed of those in power, you are destroying us all. What's the point in ownership if there's nothing left to own? Yes, I do understand the economic factors. But the economy is drastically failing as it is and there is certainly room for innovation and implementation for safer crops, energy, creating new jobs while reducing waste. Fossil fuels do need to go the way of the dinosaur (pardon the pun). We need pro active government officials and agencies to prevent multiple atrocities while trying to find a suitable arrangement for all people and their interests. Profit margins can be held up but it does require (continues on next page)

Debra DiGiacomandrea	St. Petersburg, FL	Functional medicine professionals and alternative complimentary medicine physicians already attempt to determine toxic exposures, vitamin levels, etc. in patients; and it is time for ALL physicians to add more thorough testing procedures to standard protocols. Please develop tests for determining glyphosate levels

370.	Donna Ott	Reading, PA	<p>This is essential for our health, while I don't know much about Glyphosate Testing I can tell you that what we eat, especially food with GMO's has a pretty clear effect on my family's health. We started eating mostly organic food or at least natural, minimally processed traditional diet about 14 years ago, in a (successful) attempt to help manage medical problems in several family members. These problems were not responding well to treatment at large teaching hospitals. The problems included Crohn's, Eosinophilic Colitis, multiple food allergies, low bone density, severe migraines with neurological symptoms, and more. Changing our diet and eliminating chemicals in our home facilitated a complete recovery for all, with a side effect of one family member's asthma disappearing. About 6 years ago for financial and other reasons, we were unable to continue with this diet and many of us gradually got sick again - a Crohn's flare, asthma returned, severe, very difficult to treat migraines returned in one family member after complete absence of them on an organic diet, and our youngest developed a severe form of migraine and sensitivity to gluten and sugar. One family member developed an undiagnosed but well documented neuromuscular problem - 3 ER visits and many followup appointments. Many of these problems continued for months despite the best medical care from physicians at large well known teaching hospitals and removing gluten, sugar and attempting to buy natural or organic food. In the end, a mostly organic, traditional diet gradually worked again although some of the problems were extremely difficult to treat and not responding to diet as in the past, or so I thought. Then, I discovered that GMO's were in the "natural" foods I was buying in the grocery store. These unlabeled GMOs were having a very clear effect on our health because since I discovered this, I started shopping only at Trader Joe's (store label only) and organic farms. I no longer buy beef, chicken or eggs from animals fed GMO corn, soy. I am only buying organic and we are now off nearly ALL of our medicines. We're in better health, able to eat a wider variety of foods now (one family member now can have some food with wheat and sugar, and does not get sick as a result, though we don't let her do that often.) Its time to take an honest look at what GMOs are doing to us, whether its the genetic modification, the increased use of pesticides or both, we deserve to have our health back. And its time that all doctors begin to realize the seriousness of the effect of diet on at least some of us. The risks are there and it is unfair that we are subject to them</p> <p><i>(continues on next page)</i></p>

370.	Donna Ott	Reading, PA	<p><i>(continued from previous page)</i></p> <p>while so many other countries (65) are protecting their citizens. We need help and protection too. We need long term safety studies before things like GMOs and new pesticides are used, especially in such a widespread manner. What is going to happen to us with long term, repeated daily exposure of GMOs and pesticide residues, especially given the animals studies showing concern? While not all may be as sensitive to this, if 10,000 moms can organize so quickly, with such concern and without widespread publicity (I had no idea until I read they had gone to the EPA), this is obviously a problem. And there are many others out there. I know many affected by this who were not in the Moms Across America and I am told we are NOT alone. Please give families like ours a chance to be healthy. We need strong advocates for food labeling or perhaps banning GMO as France and other countries have done. How many people must be sickened before something is done? Not everyone lives near a Trader Joe's and can afford organic food. We need a safe, accessible food supply for all and physicians who understand the problems we are facing and are willing to help us. I am very thankful to have such physicians who were able to help us return to good health, and a grocery store, Trader Joe's, to shop at for affordable, safe food. Though it is an hour away its clearly worth it to make the drive for groceries. Our local large chain store wanted me to call about every item labeled "natural" if I wanted to know whether there were GMO ingredients! It is too difficult to shop that way. Tylenol and Motrin also may contain GMO ingredients, it takes weeks to find out if a bottle has GMO corn in it. Finding out is a very long, difficult process. Please take a stand on this, as medical professionals and physicians we desperately need your help.</p>
